Dataset Description: Commodity Trade Statistics

Dataset Name: Commodity Trade Statistics

Purpose:

This dataset contains information about **international trade of commodities between countries**, including the **value of imports and exports for different commodities over multiple years**.

Dataset Size

- **Total Records:** 2,604 rows
- **Total Features:** 5 columns

Features (Columns)

Column Name	Description
country_or_area	The country or region involved in the trade transaction.
year	The year in which the trade occurred.
commodity	The specific commodity or product being traded (e.g., rice, petroleum, machinery).
flow	Type of trade transaction: Import or Export .
trade_usd	Monetary value of the trade in US dollars .

Example Records

country_or_area	year	commodity	flow	trade_usd
China	2016	Rice	Import	87,264,965
China	2016	Rice	Export	55,747,455
China	2015	Rice	Import	83,102,354

Key Characteristics

- **Time-based data:** Trade information recorded for multiple years.
- **Country-level trade:** Shows how different countries trade commodities.
- **Two trade flows:**
 - **Import** → goods entering a country
 - **Export** → goods leaving a country
- **Monetary value representation:** Trade amounts measured in **USD**.

Dataset Type

Structured Tabular Data

- Numeric feature: trade_usd
- Categorical features: country_or_area, commodity, flow
- Temporal feature: year
